WORKING PAPERS

Subtle discrimination, with Daniel Ferreira

Best Paper Award at the CSEF-RCFS Finance, Labor and Inequality Conference (Capri, Italy)

We introduce the concept of *subtle discrimination*—biased acts that cannot be objectively ascertained as discriminatory—and study its implications in a model of competitive promotions. When choosing among similarly qualified candidates, a principal with a subtle bias towards a particular group may plausibly deny being biased. We show that subtle (as opposed to overt) discrimination has unique implications. Discriminated candidates perform better in low-stakes careers,

while favored candidates perform better in high-stakes careers. In equilibrium, firms are polarized: high-productivity firms become “progressive” and have diverse management teams, while low-productivity firms choose to be “conservative” and homogeneous at the top.

Political Divide and the Composition of Households Equity Portfolios with Yihui Pan, Stephan Siegel, and Tracy Yue Wang.

WRDS Award For the Best Empirical Finance Paper, 2023 WFA (San Francisco, USA)

We examine the differences in the stock holdings of wealthy households in different counties of the U.S. with different political preferences over the past 25 years. Although political differences between counties have been increasing since at least 1996, it is not until 2013 when they started to increasingly and significantly contribute to differences in equity portfolio composition. Using the entry of a major conservative media network as a shock to county-level political preferences, we find evidence for a causal effect of political differences. We show that the effect of political differences on portfolio differences operates mainly through diverging political views on social and environmental issues rather than differences in economic expectations. Our study suggests that political polarization could reduce risk sharing and segment U.S. equity markets by political lines and — given the partisan segregation — geographical lines.
